

Specialists in manufacturing and engineering services, connecting engineered products with manufacturing solutions.

Proven Connections

Proven Connections

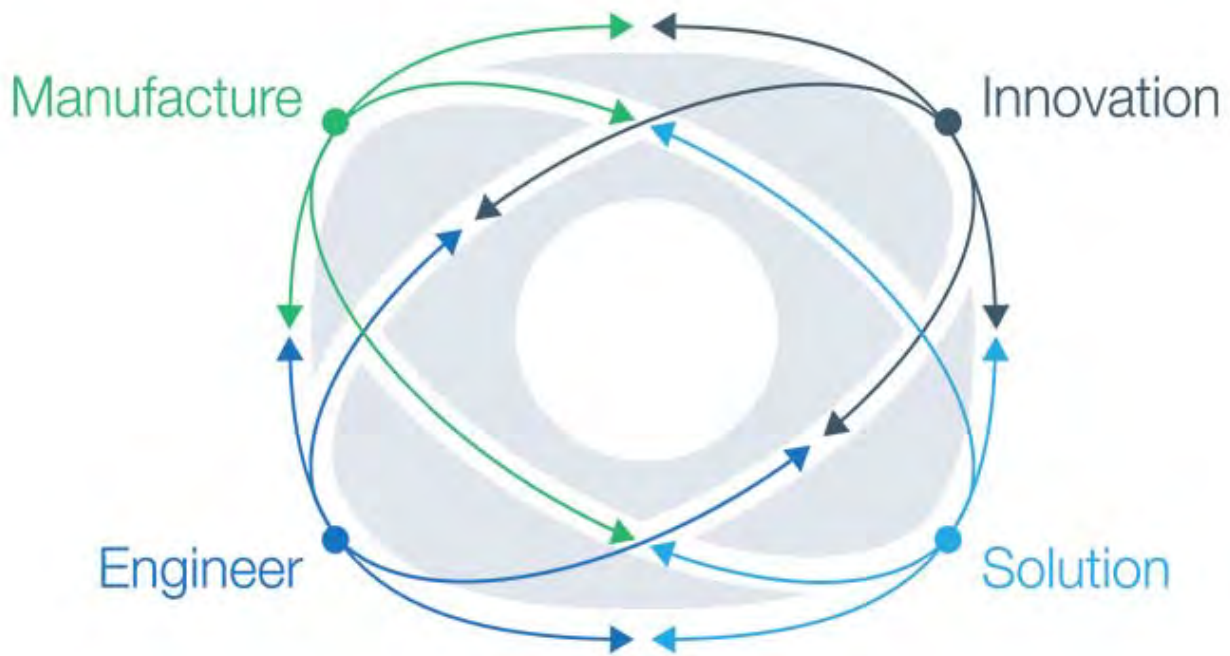

Torema Engineering works with clients to manufacture, evolve and deliver products across many industries such as the energy, mining, consumer, construction, government, and marine sectors. We are an international organisation with proven global connections and production facilities in China and Australia.

We assist you with all aspects of your product development then become your manufacturing partner to deliver these products quickly and to a high quality. We apply our technical and manufacturing expertise to design your products for any international market, mass produce it, and efficiently distribute it to worldwide destinations. We have connections to testing houses, approval authorities and a thorough understanding of the requirements needed to allow products to be safely marketed and sold in different countries. Our competitive pricing system moves you seamlessly from initial product design and implementation phases to stable production, then through to

redevelopment or redesign phases depending on your requirements or objectives.

We take the time to understand your product, your business, and your market. We believe your most valuable assets are your markets, reputation, and ability to develop new products and intellectual property. We are uniquely positioned to deliver to you the best solutions and engineering possibilities, in-turn allowing you to concentrate scarce organisational resources away from assembly effort and equipment and into marketing, sales growth, and building your business. We give you the confidence to outsource production of your most important products knowing that we have the capacity, capability, understanding and focus to meet your market demands, and in doing so allowing you to avoid capital investments in plant and equipment or even setting up distribution locations for your products.

We have the proven connections to allow you to expand products, markets, and possibilities.

Responding with a production focus

Torema Engineering was founded as a manufacturer and to this day it remains the foundation of the business. We believe great ideas and good products are nothing unless they are conceived and tied to practical manufacturing techniques and strong quality systems. We offer clients product

and manufacturing solutions built on decades of production experience from our Australian and Chinese facilities. We bring to the table a rich history of proven design and production solutions which we apply to create new product and market opportunities for our clients.

Innovating with insight

Efficient product development requires a deep understanding of product requirements, application, your market position and competitive advantages. Regardless of whether the task is to improve an existing product or develop a new product, our aim is to understand your product requirements as well as you do. Initially

this involves not only time to understand your product expectations but to really get to know your business and market challenges as well. We achieve great results by interacting with clients as a development partner rather than a supplier enabling better outcomes and valuable long term relationships.

Making it right

At Torema Engineering we are committed to making it right. We understand that manufacturing your products comes with great responsibility to your business, your brand, and your market reputation. We understand the frustration and inefficiency that comes with inconsistent product quality and we are committed to making it right. Our commitment

to “make it right” extends to use of an ISO9001 certified quality system at our Chinese production facility, our proven relationships with supply partners to ensure consistent component quality, and our commitment to the long term success and growth of your business.

Connect solutions to products

At Torema Engineering we connect solutions to products by developing innovative engineering solutions to realise clients’ potential. Our team of mechanical, electrical, and electronics engineers, production and operations staff have decades of experience generating innovative product and manufacturing solutions with a real passion for

making great products. We have active relationships with test laboratories, approval authorities, suppliers, prototyping services, tooling shops, and logistics companies to help you accelerate your product development and confidently launch it into international markets.
